                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse region of the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine light chain hypervariable region (VL) CDR-3 used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                         (SUNN-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IMC-1C11; chimeric antibody; mouse; human; antagonist; VEGF; vascular endothelial growth factor; angiogenesis; antiangiogenia antitumour; neoplasm; collagen-vascular disease; autoimmune die

The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-IC11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of complementarity determining region 3 of the light chain variable region (see also AAB82702) of IMC-IC11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, to repether with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a mani-angiogenic molecule and a chemotherapeutic agent, to produce a
                                             Novel monoclonal antibody specific for human sialoadhesin diagnosis, prevention, treatment of allergy, asthma, eczem such as lymphoma, leukemia or systemic mastocytosis, in a
                                                                                                                                                                                                                                                                                    (SMIK )

This antibody binds to human sialoadhesin factor-2 (SAF-2). The antibody is useful for treating or preventing allergic rhinitis, allergies, asthma, anemia, eczema or diseases such as lymphoma, leukemia or systemic mastocytosis in a mammal. It is also useful
                                                  The present invention relates to novel immunoglobulin molecules that bind to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FIK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VBGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR plC11 scFv antibody light chain complementarity determining region 3 (CDRL3) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    detecting the presence of a cell, especially eosinophil in a sample, by detecting binding of the antibody to SAF-2. The antibody can be coupled to toxins, antiproliferative drugs or radionuclides to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zhu
                                                                                                                                                                                                                                                                                                                                                                                                                    Novel immunoglobulin molecule for reducing tumor growth, binds to kinase insert domain-containing receptor with an affinity comparable human vascular endothelial growth factor, and neutralizes activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mouse; immunoglobulin; kinase insert domain-containing receptor; KDR; foetal liver kinase; FLK-1 receptor; vascular endothelial growth factor; VEGF; tumour growth; light chain complementarity determining region 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                CC site located to the N terminus of the CH1 domain. (1) is useful for:

CC (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis;

CC (vEGF) receptor; reducing tumour growth; inhibiting angiogenesis;

CC reducing endothelial cell proliferation; inhibiting VEGF induced

CC migration of human leukaemia cells; blocking interaction of a protein and

CC its ligand, promoting interactions between immune cells and target cells;

CC and in vivo and in vitro for investigative, diagnostic or treatment

CC enthods. The design of (1) provides for efficient production so that

CC substantially all of the antigen-binding proteins produced are assembled

CC in the desired configuration. (1) is bivalent and bispecific, homogeneous

CC and in tetrameric form. The heavy chain constant domains which constitute

CC the PC region (e.g., CH2 and CH3 for an IGG molecule) of a natural

CC antibody and which provide other antibody functions can be present. There

CC is no requirement for processing in vitro to obtain the complete product.

CC This peptide sequence represents the light chain variable domain

CC complementarity determining region L3 (CDRL3) incorporated into an

CC antigew-binding protein described in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                           The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (WEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells callular finction of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse peptide relating to the invention.

Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody light chain fragment used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; light chain; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; mouse;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-662942/76.

                                                                                                                                                                                                                                                                                                                                                                                  Best
                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and in vivo and in vitro for investigative, diagnostic or treatment methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the FC region (e.g., CH2 and CH3 for an Ig molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a light chain variable domain (VH) incorporated into FV, an engineered protein containing a heavy chain variable domain and a light chain variable domain in one polypeptide chain, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         are stably associated in an immunoglobulin like complex. PI has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CI domain), and P2 has an antigen-binding site located to the N terminus of the CHI domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor, reducing tumour growth; inhibiting anglogenesis; reducing endothelial cell proliferation; inhibiting VEGF induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides -
                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-MAY-2000; 2000US-206749P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-NOV-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cell proliferation inhibitor.
                                                                      VEGF binding related protein SEQ ID No

The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention.

This antibody binds to human sialoadhgain factor-2 (SAF-2). The antibody is useful for treating or preventing allergic rhinitis, allergies, asthma, anemia, eczema or diseases such as lymphoma, leukemia or systemic mastocytosis in a mammal. It is also useful for detecting the presence of a cell, especially eosinoghil in a sample, by detecting binding of the antibody to SAF-2. The antibody can be coupled to toxins, antiproliferative drugs or radionuclides to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chain antibody, a monovalent single chain antibody, a diabody, a triabody, a humanised antibody or a chimerised antibody. The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as VEGF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, because of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          hemangioblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a preferred heavy chain complementary determining region of the immunoglobulins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              colon carcinoma; ovarian carcinoma; neuroblastoma;
glioblastoma multiforme; melanoma; therapy; light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IMC-1C11; chimeric antibody; mouse; human; antagonist; VEGF;
vascular endothelial growth factor; angiogenesis; antiangiogenic;
antitumour; neoplasm; collagen-vascular disease; autoimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New immunoglobulin molecules are described that bind kinase insert domain-containing receptor (KDR) with a comparable affinity to human vascular endothelial growth factor (VEGF). The antibodies neutralise KDR activation. The immunoglobulin may be a multivalent single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               receptor with the same affinity as vascular endothelial growth factor, used to, reduce tumour growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an capiogenic dependent condition in a mammal, especially a human.

The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent.

The anti-angiogenic molecule inhibits or blocks the action of a regression or arrest of the conditions that can be treated include and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

N-PSDB;
The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an
                                                                                                                              New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                    Zhu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel immunoglobulin molecules that bind to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FLK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VEGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR plCl1 scFv antibody
                                                                                        Claim 57; Page 57; 64pp; English.

                                                                                                                                                                                                                                                                 CC antigen-binding site located to the N terminus of immunoglobulin (Ig)
CC light chain constant domain (CL domain), and P2 has an antigen-binding
CC site located to the N terminus of the CH1 domain. (I) is useful for:
CC neutralising the activation of a vascular endothelial growth factor:
CC (VEGF) receptor, reducing tumour growth; inhibiting angiogenesis;
CC reducing endothelial cell proliferation; inhibiting angiogenesis;
CC endigration of human leukaemia cells; blocking interaction of a protein and
CC its ligand; promoting interactions between immune cells and target cells;
CC and in vivo and in vitro for investigative, diagnostic or treatment
CC methods. The design of (I) provides for efficient produced are assembled
CC in the design of (I) provides for efficient produced are assembled
CC in the desired configuration. (I) is bivalent and bispecific, homogeneous
CC and in tetrameric form. The heavy chain constant domains which constitute
CC entibody and which provide other antibody functions can be present. There
CC is no requirement for processing in vitro to obtain the complete product:
CC into Fv, an engineered protein containing a heavy chain variable domain
CC and a light chain variable domain (NH) incorporated
CC into for the invention of the inventio

Sequence 28, Application US/09976787

Patent No. US20020064528A1

GENERAL INFORMATION:

APPLICANT: Witte, Larry

ITITLE OF INVENTION: Antibodies Specific to KDR and Uses Thereof

FILE REFERENCE: 11245/46505

CURRENT APPLICATION NUMBER: US/09/976,787

CURRENT FILING DATE: 2001-10-12

PRIOR APPLICATION NUMBER: US 09/493,539

PRIOR PFILING DATE: 2000-01-28

PRIOR APPLICATION NUMBER: US 60/117,726

PRIOR APPLICATION NUMBER: US 60/117,726

PRIOR FILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 40

SOFTWARE: WordPerfect 8.0 for Windows

SEQ ID NO 28

LENGTH: 240

TYPE: PRT

ORGANISM: Mouse
